

Aerangis citrata

Native of: Madagascar

Habitat: A widespread epiphyte in Madagascar growing epiphytically from sea level to 1500m. It always grows in shade and close to water.

Description: A miniature species with 3-6cm leaves and relatively large 2cm flowers on stems carrying up to eighteen flowers.

Cultivation Guidance: At school we grow this plant mounted and hot (min18°C) in low light. It's habitat suggests it should be happy cooler than this.

Flowering season: variable spring summer and autumn

Flask to flowering approx: 2yrs

Seedling source: Kath Fairhurst
