

Ada aurantiaca

Native of: Colombia, Venezuela and Ecuador

Habitat: An epiphyte from wet forest between 2100 and 2300m altitude.

Description: A medium sized plant that produces arching 50cm spikes each with 5-15 striking 2.5cm flowers.

Cultivation Guidance: At school we grow this species cool (min 10°C) and shaded in the summer. We keep plants moist throughout the year.

Flowering season Spring

Plant source: Writhlington School division
